DT Article

LA English

AB Glandless cotton cotyledons stimulated to produce sesquiterpenoid phytoalexins by inoculation with *Xanthomonas campestris* pv. *malvacearum*, or by injection of oligogalacturonide elicitors, generated a hydrocarbon that was absent in mock-inoculated or non-inoculated cotyledons. Enzyme preparations from the same cotton cotyledons catalysed cell-free reactions

which converted (E, E)-(1-3H)farnesyl **pyrophosphate** into a predominant tritium-labelled hydrocarbon product. Large-scale cell-free reactions catalysed by enzyme preparations from cotton cotyledons previously inoculated with *Xanthomonas campestris* pv. *malvacearum* converted nonradioactive (E, E)-farnesyl **pyrophosphate** into the hydroca
